

The background of the image is a deep space photograph. It features a dense field of stars of various colors (white, yellow, orange, blue) against a dark blue and black cosmic backdrop. A prominent, bright blue nebula or emission region is visible in the upper left and center, with wispy, filamentary structures. To the right, there are darker, more diffuse regions of light brown and tan, possibly representing interstellar dust or a different type of nebula. The overall composition is centered and evokes a sense of vastness and wonder in astronomy.

Astronomy Club

When and where we meet?

We meet biweekly after school on Friday in Room 200

Sign up QR code

What do we do?

- Learn about cool space facts!
- Do observations with telescopes!
- Take interesting pictures of the sky (like the background)!
